

Instructor: Mousa Al-Haddad

Course: Start Learning Java

Lecture: User inputs

```
import java.util.Scanner;

public class UserInputs {

    public static void main(String[] args) {

        Scanner input = new Scanner (System.in);

        System.out.println("What is your name ?");
        System.out.println("Hi, " + input.next() + ".");

        System.out.println("What is your name ?");
        System.out.println("Hi, " + input.next() + " " +
input.next() + ".");

        System.out.println("What is your name ?");
        System.out.println("Hi, " + input.nextLine() + ".");

        input.close();
    }
}
```
